Mojaloop Platform Quality & Security

Product Council update, PI-24 Mid-PI

Workstream Update

Workstream Name:	Mojaloop platform quality & security (PQS)
Roadmap Pillar:	Quality Product (Foundation)
Lead:	Sam Kummary
Workstream Objectives:	The focus for PI-24 will be on 1) GitHub maintenance of Mojaloop repositories (used in the platform), continuation of 2) Hardening Mojaloop core and addressing any known and reported quality, security issues. 3) We also want to start the activity of identifying all the third party dependencies in Mojaloop to better manage situations when issues arise with any of them or as some of them are not maintained. 4) Bonus: Another objective this PI is to look into achieving OpenSSF badge for Mojaloop.
Progress Against Objectives:	1. Mojaloop GitHub repos maintenance - tightening up on branch protection rules 2. Dependabot alerts 3. SonarCloud features usage on PRs and repositories 4. Projects (github issues) for third-party dependency management created
Anticipated Progress by PI End:	1. GitHub repositories that are all part of Mojaloop platform to follow best practices 2. Mojaloop release made with all high, critical dependabot security alerts addressed
Roadblocks:	1. Resourcing issues, no funded team available.
Support Needed:	1. No dedicated team for the PI, thankful for the contributions so far. 2. Further contributions welcome.
